## PROFESSIONAL SUMMARY

High-performing Software Developer at Hexaware Technologies with over 2 years of experience specializing in Java/React full-stack development and enterprise AWS cloud migrations. Proven expertise in architecting high-scale serverless data pipelines, managing migrations of up to 40M records per table. Two-time Trailblazer Award winner for technical excellence and rapid upskilling in cloud-native technologies.

## CORE COMPETENCIES

- **Backend:** Java, Spring Boot, Spring Core, Spring Security, Spring REST, Hibernate, JPA
- **Frontend:** React, JavaScript, Bootstrap
- **Cloud & Data:** AWS (Step Functions, Lambda, S3, Secrets Manager, Glue), PostgreSQL, Redshift, PySpark
- **Database Optimization:** Partitioning, Indexing, Performance Tuning (work\_mem), SQL
- **Architecture:** Serverless ETL, RESTful APIs, Event-Driven Workflows, Microservices Integration

## WORK EXPERIENCE

### Hexaware Technologies | JAVA + REACT FSD

23 May, 2024 – Present

#### Key Project: Enterprise Redshift to PostgreSQL Migration (POC to PROD)

- Engineered a pioneering serverless migration framework using **AWS Step Functions, Lambda, and Glue** to transfer data between Redshift and PostgreSQL.
- Architected dual-workflow systems: a **Historical Data Loader** for baseline migrations and an **Incremental Loader** for ongoing synchronization.
- Implemented **Change Data Capture (CDC)** logic using "Last Update Date" tracking to identify and process modified records efficiently.
- Optimized performance for high-volume data loads of **30–40 Million records per table** through advanced PostgreSQL tuning, including **table partitioning, indexing,** and **work\_mem** configuration.
- Managed secure environments using **AWS Secrets Manager** and handled large-scale data staging via **AWS S3**.
- Monitored and debugged complex ETL jobs by analyzing **CloudWatch logs,** subnets, and parameter group configurations.

#### Key Project: AWS Management API Suite (Java/Spring Boot)

- Developed a custom suite of Java APIs to programmatically control and trigger **AWS Step Functions**.
- Enhanced security and operational efficiency by enabling automated execution

management, reducing the need for direct AWS Console access in restricted **Production (PROD)** environments.

- Collaborated with cross-functional teams to ensure seamless integration between custom code and cloud infrastructure.

### **Full-Stack Application Development**

- Developed and maintained scalable applications using **Java (Spring Boot) and React**.
- Implemented design patterns and principles to ensure scalable and maintainable code.
- Followed **Agile** methodologies across Dev, QA, UAT, and Prod environments.
- Utilized **Spring Core, Hibernate, and JPA** for backend persistence and efficient database communication.

### **AWARDS & ACHIEVEMENTS**

- **Trailblazer Award (Q4 2025)**: Recognized for sustained technical excellence and contribution to high-impact cloud migration projects.
- **Trailblazer Award (Q4 2024)**: Awarded for exceptional continuous learning and rapid upskilling in AWS serverless architectures.
- **Vice-President, E-Cell (2021-23)**: Led entrepreneurship initiatives and organizational strategy at Oriental College of Technology.

### **TECHNICAL PROJECTS**

#### **Cryptocurrencies Portfolio and Management (Python)**

- Developed a single-platform application for real-time cryptocurrency portfolio tracking and management.
- Integrated external APIs to trigger automated alerts based on specific price volatility thresholds.

### **EDUCATION**

- **B.Tech in Computer Science & Engineering** | Oriental College Of Technology (RGPV) | **8.78 CGPA** (2019-2023)
- **Class XII (PCM)** | Graphite Higher Senior Secondary School (CBSE) | **8.2 CGPA** (2019)
